LABORATORY

Planning for FACET-II as a Community Resource

FACET-II

Photo injector
(e⁻ beam only)
FY17-19

e⁺ damping ring
(e⁺ or e⁻ beams)
FY19-20

SLAC Linac in 2025

FACET-I Experience

Typical requirements for FACET experiments @ 3.2 nC (20.35 GeV)

e^- & e^+

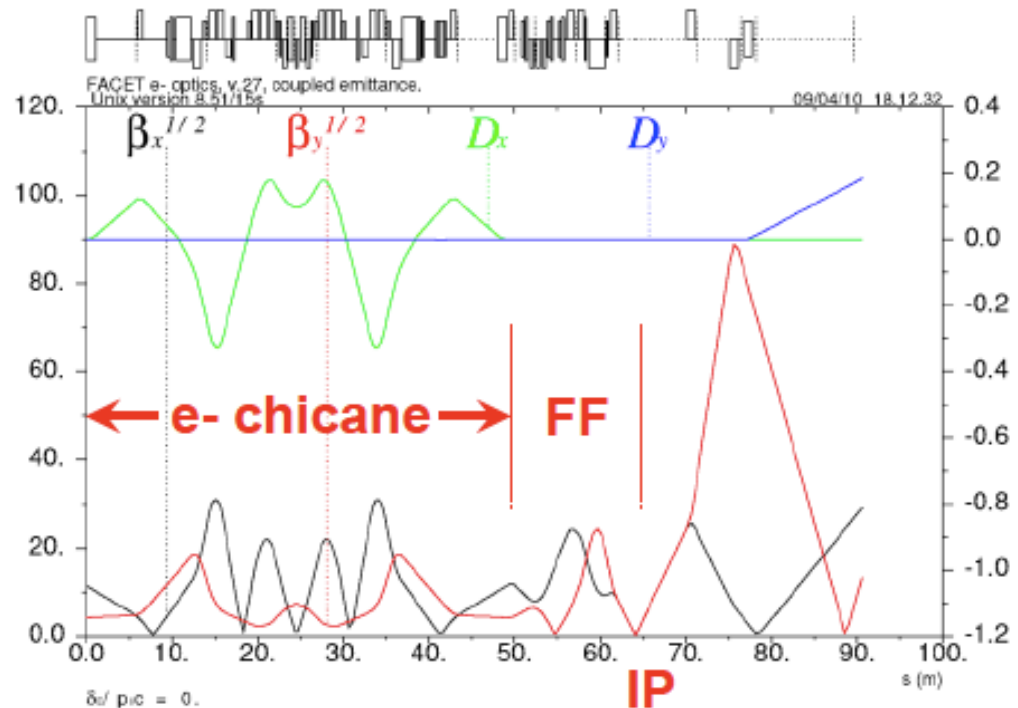

- $\sigma_x, \sigma_y \sim 20\text{-}30 \text{ }\mu\text{m}$
- $\sigma_z \sim 20\text{-}30 \text{ }\mu\text{m}$ (compressed)
 - $\delta_E \sim 1.4\%$ rms
- $\sigma_z \sim 60 \text{ }\mu\text{m}$ (un-compressed)
 - $\delta_E < 1\%$ rms

Need to control dispersion, coupling, focal waist position

- 4 sextupoles on movers
- 2 skew quadrupoles

For high energy spread:

- **chromaticity and second-order dispersion compensation by sextupoles**

FACET represented a beam dynamics challenge with simultaneous transverse and longitudinal phase space requirements and user-driven flexibility requirements

FACET-II Key Performance Parameters

| <i>Description of Scope</i> | <i>Units</i> | <i>Threshold KPP</i> | <i>Objective KPP</i> |
|--|---------------------------------------|----------------------|----------------------|
| <i>Beam Energy</i> | <i>[GeV]</i> | <i>9</i> | <i>10</i> |
| <i>Bunch Charge (e-/e+)</i> | <i>[nC]</i> | <i>0.1/0.1</i> | <i>2/1</i> |
| <i>Normalized Emittance in S19 (e-/e+)</i> | <i>[$\mu\text{m-rad}$]</i> | <i>50/50</i> | <i>20/20</i> |
| <i>Bunch Length (e-/e+)</i> | <i>[μm]</i> | <i>100/100</i> | <i>20/20</i> |

Threshold KPPs

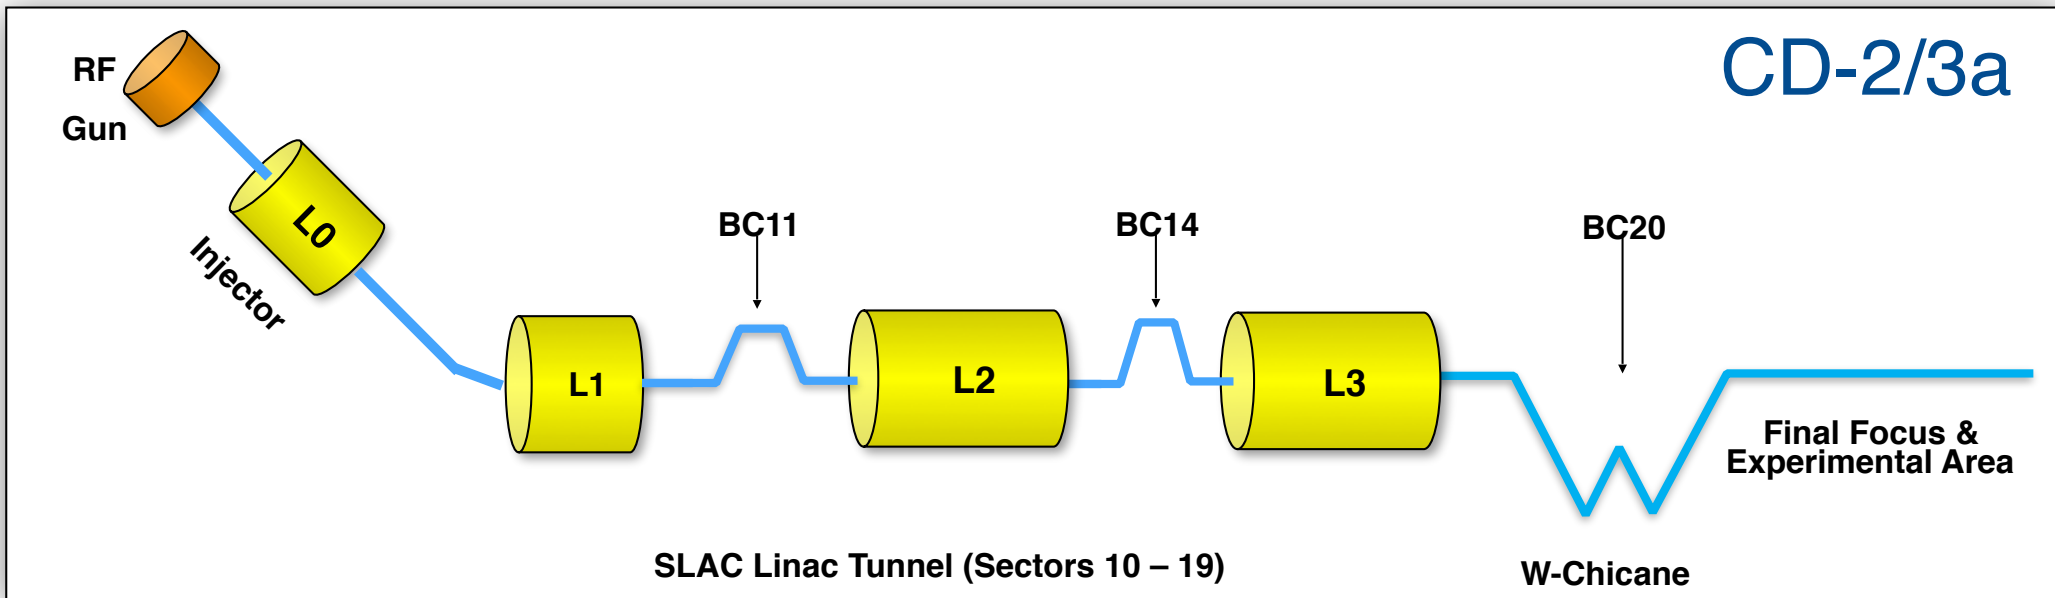

- Minimum parameters against which the project's performance is measured when complete

Objective KPPs

- Desired operating parameters which may be achieved during steady operation

Baseline design allows for objective key performance parameters specified by science program

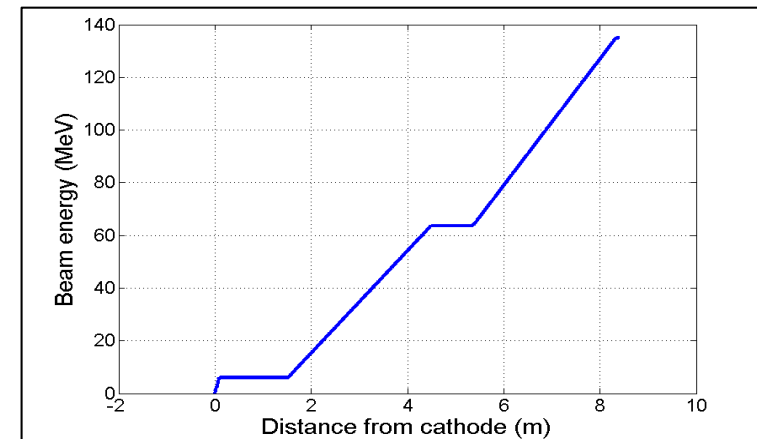

- **Goal:** Deliver compressed electron beam from S10 to experiments in S20
- **Major upgrade:** Electron beam photoinjector in Sector 10
- **Scope:** Injector, shielding wall in S10, bunch compressors in S11 (BC11) and S14 (BC14), beam diagnostics

Electron Injector

- NLCTA (“Orion”) RF Gun, $E_0=90\text{MV/m}$
- LO accelerates to **135 MeV**
- *LH chicane – off project, space reserved*
- 35° bend into main linac L1 @ Sector 11
- $Q < 5 \text{ nC}$, $<300 \text{ A}$ peak current
- Design: $\gamma\epsilon_x = 3 \mu\text{m-rad}$ @ **2 nC, 240 A**
- Emittance compensation design using IMPACT-T
- *Beam distribution from IMPACT-T simulation used to assess FACET-II performance in tracking model*

Design of the Injector Complex up to BC11 based on LCLS Sector 20 injector

Electron Injector Optimization & Simulation

| Parameter | Symbol | Unit | Req. | Tracking Simulation Results | | | |
|--|------------------------|-------------------|------|-----------------------------|------------|-----------|-----------|
| | | | | Orion | Orion + LH | LCLS | LCLS + LH |
| Peak current at injector exit | I_{pk} | kA | - | 0.24 | 0.24 | 0.36 | 0.33 |
| Peak current at Sector 20 IP | I_{pk} | kA | >10 | 70 | 36 | 95 | 56 |
| Bunch length after injector (rms) | σ_z | μm | - | 838 | 839 | 617 | 618 |
| Bunch length at Sector 20 IP (core rms) | σ_z | μm | <20 | 1.8 | 4.3 | 1.5 | 2.8 |
| Transverse emittance after injector (90%) | $\gamma\epsilon_{x,y}$ | $\mu\text{m-rad}$ | - | 2.9 | 2.9 | 3.0 | 3.0 |
| Transverse emittance into Sector 19 (90%) | $\gamma\epsilon_{x,y}$ | $\mu\text{m-rad}$ | <20 | 3.9 | 3.3 | 4.0 | 3.5 |
| Tranverse beam size at Sector 20 IP (core rms) | σ_x, σ_y | μm | <20 | 17.7, 12.2 | 16.1, 11.9 | 17.5, 9.8 | 16.5, 9.9 |

- ϵ -compensation optimization & tracking with IMPACT-T & Lucretia
- Optimize:
 - Gun Sol
 - Gun RF phase
 - Cathode-L0a drift
 - 2nd solenoid

LH = "laser heater"

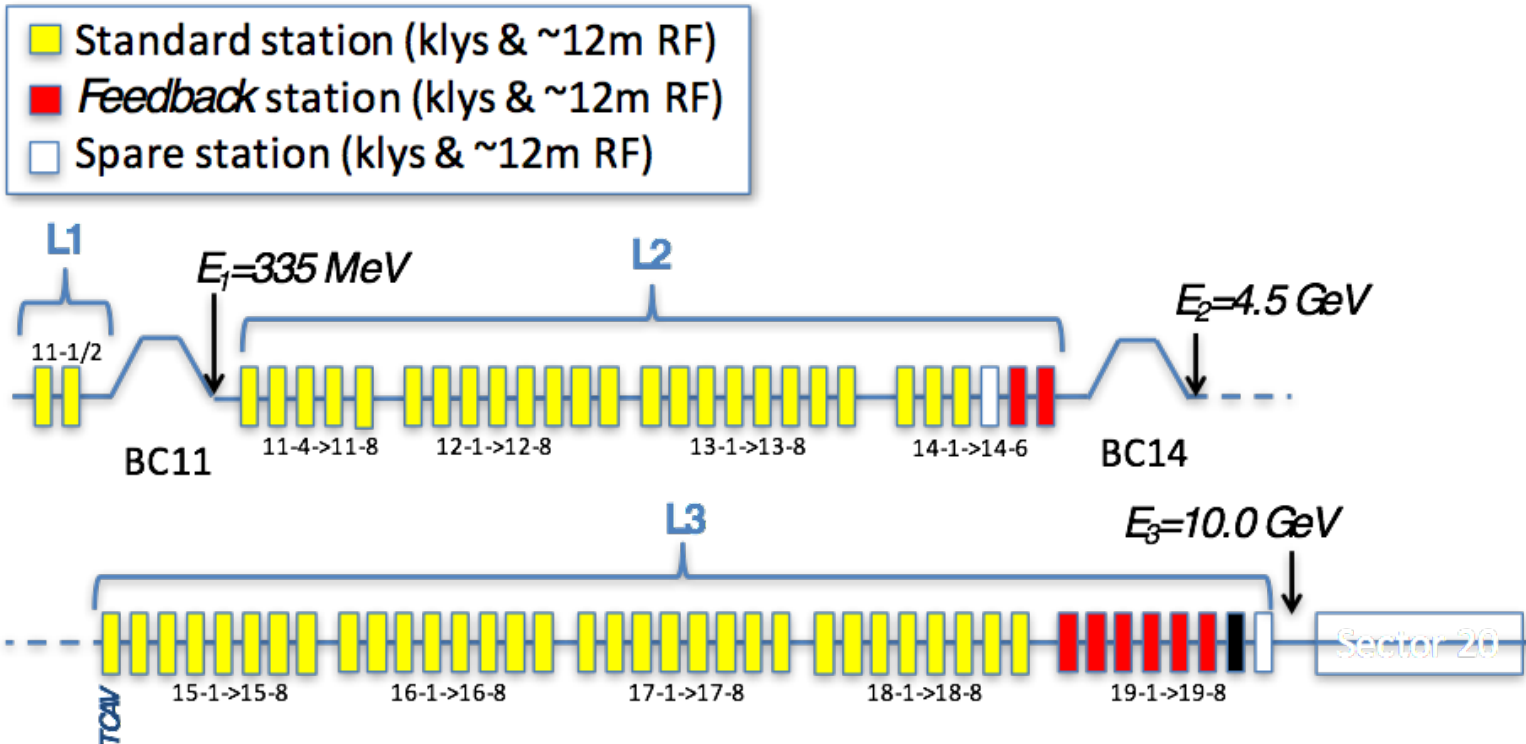

All options meet KPP requirements
Increased longitudinal brightness possible with LCLS gun

Baseline FACET-II Electron Design Parameters

Compression scheme design satisfies KPP's, flexibility to satisfy all planned experimental activities - verified with tracking simulations

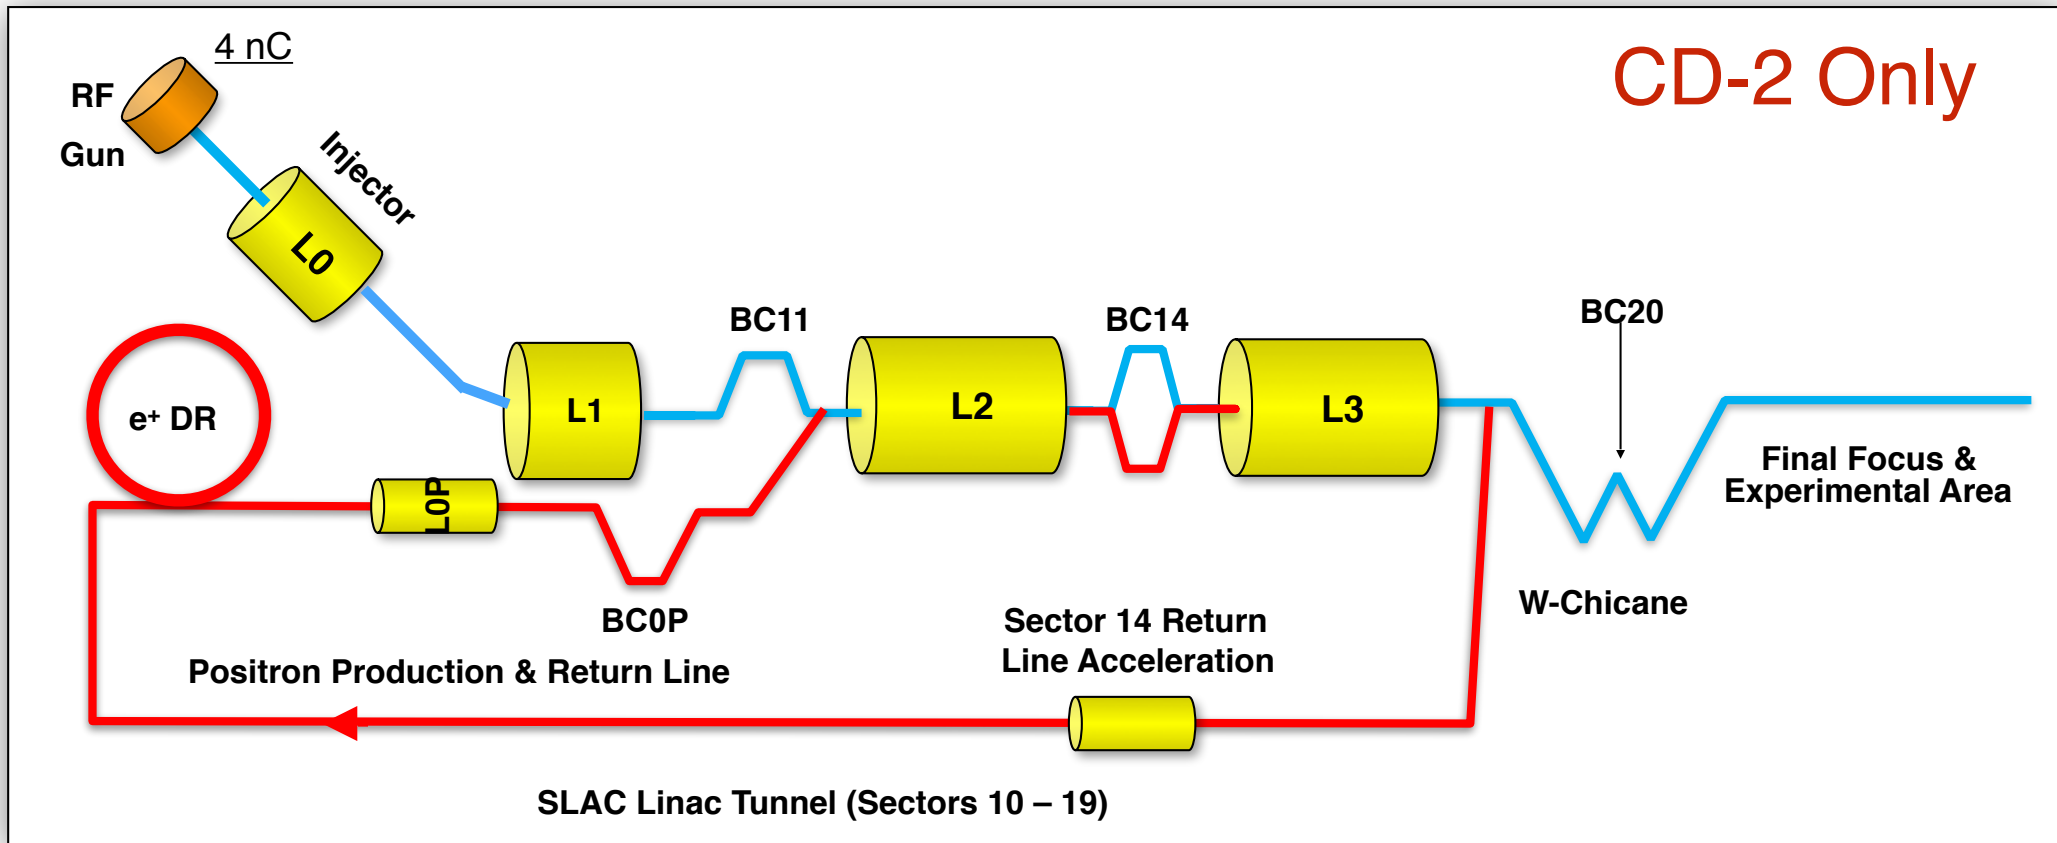

Main Linac Layout & Bunch Compressors

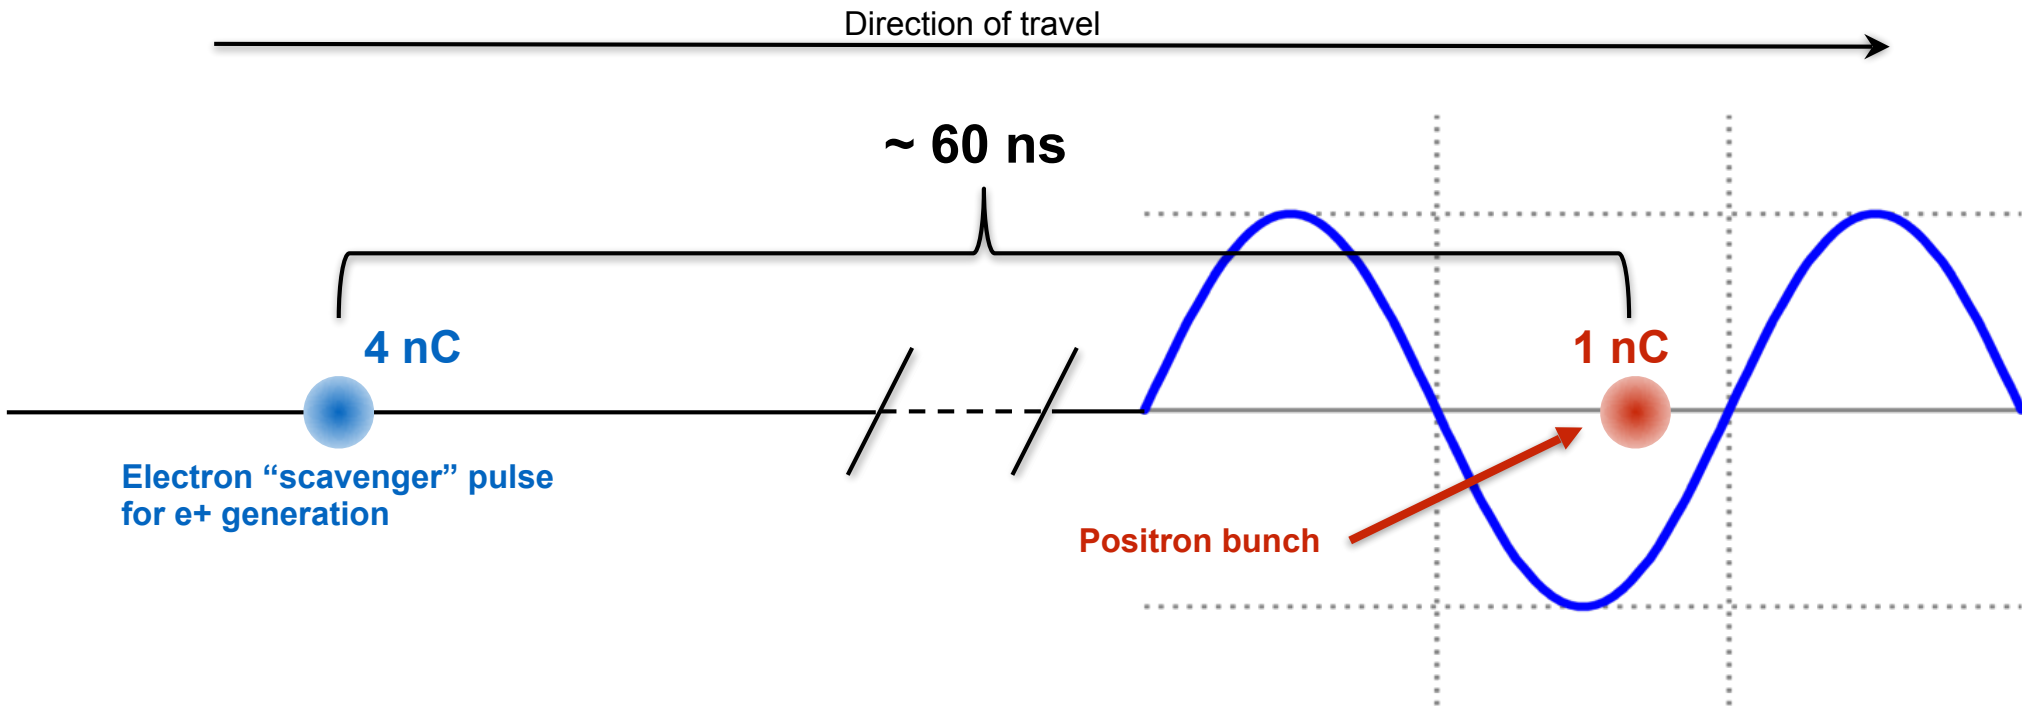

- Sector 20 operations 4.0-13.5 GeV possible (10 GeV design)
- Spare klystrons, feedback and TCAV diagnostics stations included in design

Layout of Linac Sectors 11-19 to meet required flexibility of experimental program

- **Goal:** Deliver compressed electron beam from S10 to experiments in S20
- **Major upgrade:** Positron damping ring
- **Scope:** Damping ring, positron bunch compressor & return line

FACET-II Pulse Structure (Stage-II)

- Electron "scavenger" pulse pulled off in S19 by existing fast kicker to generate e+ bunch

Two bunches per pulse shared in L2 and L3 for Stage 2 operations

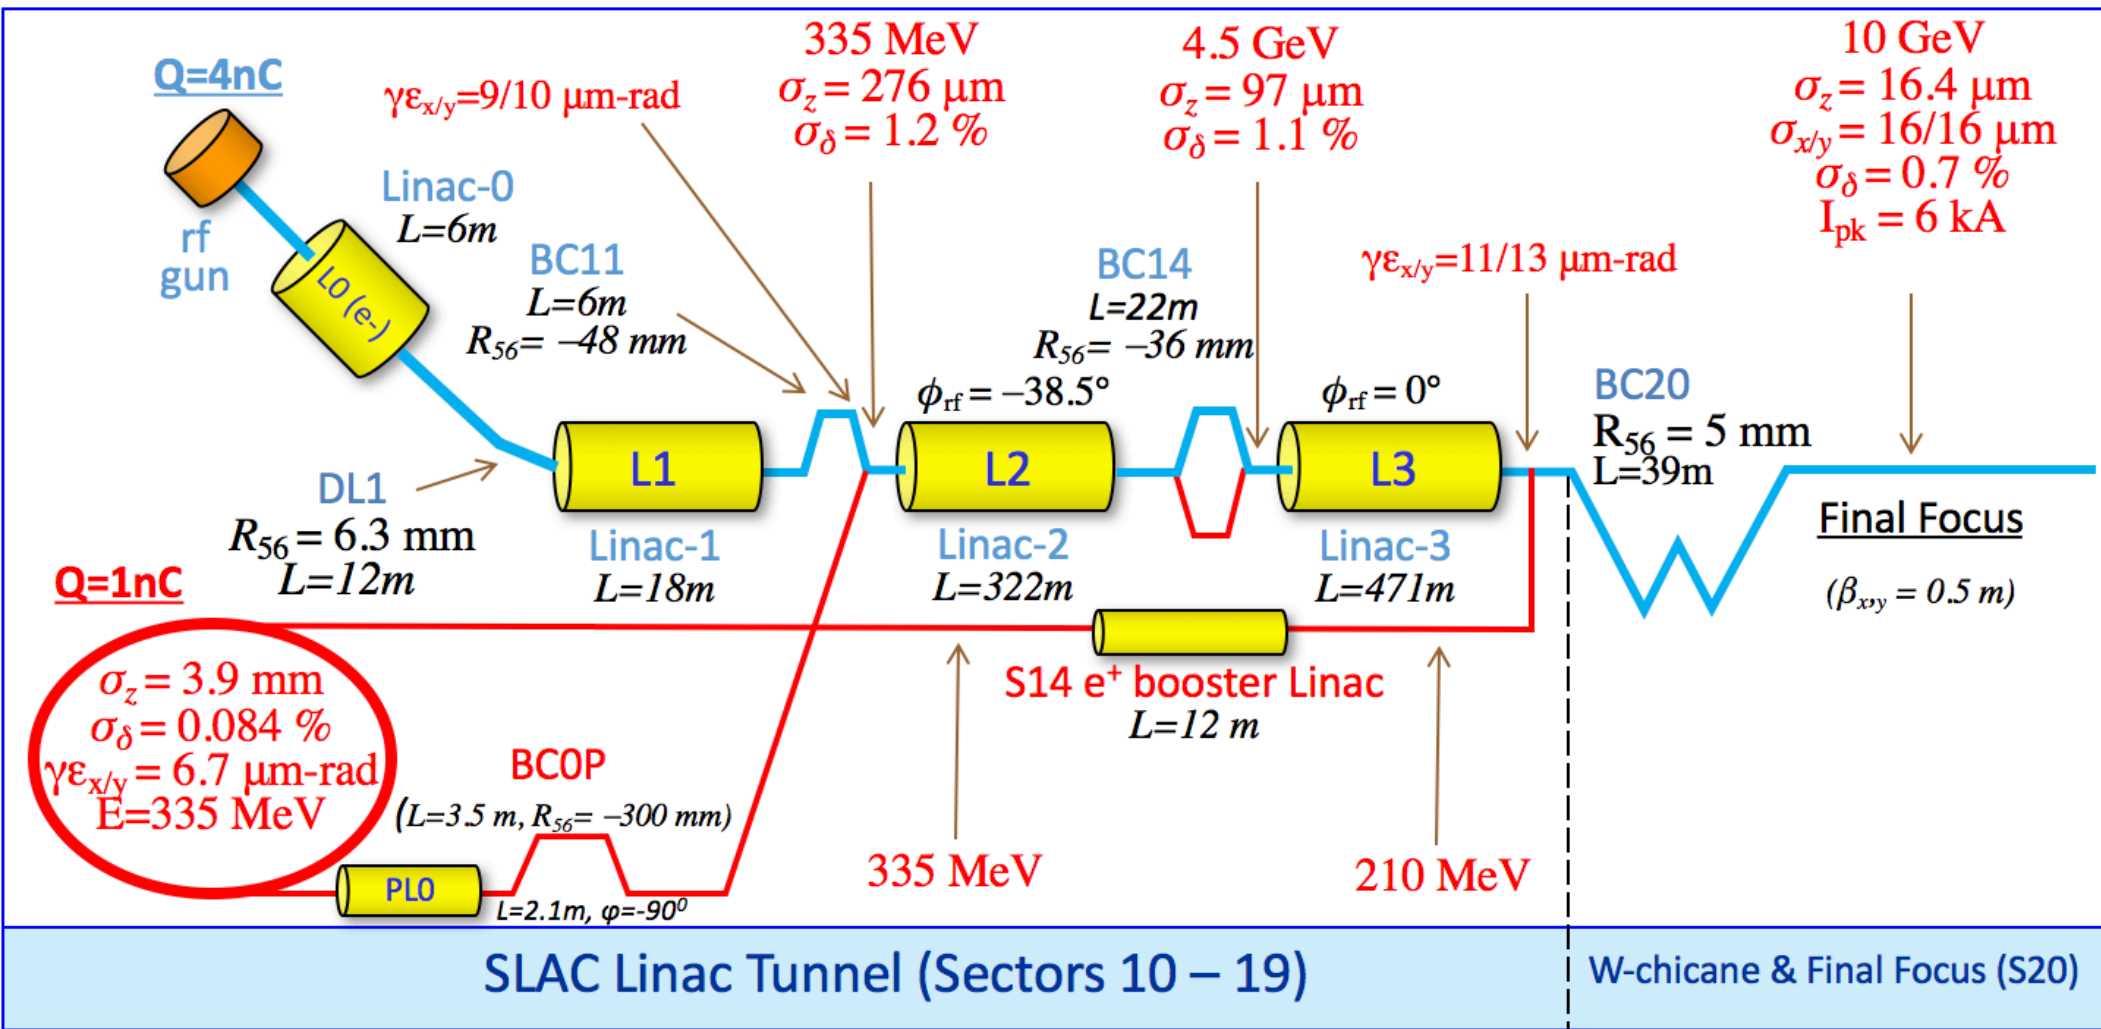

Positron Damping Ring in Sector 10

- 2.9 m diameter ring
- Vertical injection & extraction
- SLC septa, kickers & RF
- New combined-function arc magnet designs

CAD drawing of Damping Ring layout & integration in sector 10

Baseline FACET-II Positron Parameters

Compression scheme designed to satisfy objective KPP, verified with tracking simulations

Monte Carlo Simulation Including Errors

| KPP Parameter | Electron Bunch | | Positron Bunch | |
|--|----------------|-------------|----------------|--------------|
| | Design Req. | Simulation | Design Req. | Simulation |
| ϵ_x ($\mu\text{m-rad}$) [S19] | <20 | 4.4 +/- 0.5 | <20 | 10.7 +/- 0.7 |
| ϵ_y ($\mu\text{m-rad}$) [S19] | <20 | 3.3 +/- 0.1 | <20 | 13.0 +/- 1.2 |
| σ_z (μm) [IP] | <20 | 3.1 +/- 1.5 | <20 | 16.5 +/- 0.2 |
| I_{pk} (kA) [IP] | >10 | 64 +/- 16 | >5 | 5.8 +/- 0.2 |

A MC simulation including all known error sources was performed – KPP Design parameters are met with expected error tolerances

Configuration for 2-Bunch (e-) Experiments:

Request:

- 2 Bunches: Drive + Witness, $\Delta t = 250$ fs [~ 75 μm]
- Drive Bunch:
 - $Q = 1.6$ nC
 - $I_{\text{pk}} > 15$ kA
 - $\gamma\epsilon_{x,y} < 10$ $\mu\text{m-rad}$
- Witness Bunch:
 - $Q = 0.5$ nC
 - $I_{\text{pk}} > 7.5$ kA
 - $\gamma\epsilon_{x,y} < 10$ $\mu\text{m-rad}$
- I_{pk} Drive:Witness = 2:1

Longitudinal Bunch Profile Definition @ Laser Heater

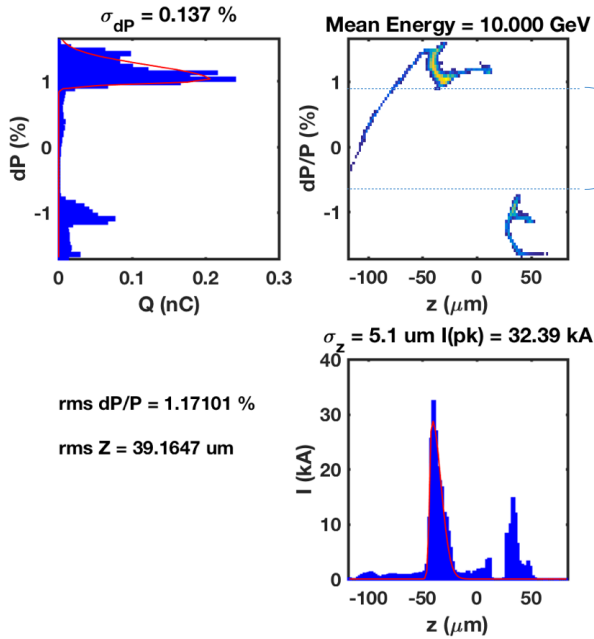

Initial $\gamma\epsilon_{x,y} = 3.2 \mu\text{m-rad}$

| Property | Drive Bunch | Witness Bunch |
|--|---------------|---------------|
| Q / nC | 1.6 | 0.5 |
| δ_E / E (% uncorrel.) | 0.08 | 0.08 |
| Shape | Top-hat, ramp | Top-hat, ramp |
| Ramp Time / μs | 10 | 10 |
| L / mm | 1.0 | 0.375 |
| $\langle Ez \rangle r_{\text{correl}}$ | -0.45 | 0.4 |
| dz / mm | 1.62 | |

Highlighted boxes are optimized values

Particle Tracking @ E200 IP

S20 Notch Collimator (100 pC)

Linac RF Phase Settings

L1 $\varphi = -18.0^\circ$

L2 $\varphi = -38.0^\circ$

$\Delta t @ IP = 250 \text{ fs}$

BC11 & BC14 unchanged

| Parameter @ IP | No COLL | | S20 Notch COLL | |
|--|---------|---------|----------------|---------|
| | Drive | Witness | Drive | Witness |
| Q / nC | 1.6 | 0.5 | 1.5 | 0.5 |
| δ_E / E (% rms) | 0.24 | 0.24 | 0.16 | 0.25 |
| I_{pk} / kA | 32 | 16 | 34 | 16 |
| $\gamma\epsilon_y / \mu\text{m-rad}$ | 3.4 | 3.2 | 3.3 | 3.2 |
| $\gamma\epsilon_x / \mu\text{m-rad}$ | 6.4 | 7.8 | 5.6 | 7.8 |
| $\gamma\epsilon_x / \mu\text{m-rad}$ (90%) | 5.7 | 6.1 | 5.1 | 6.1 |

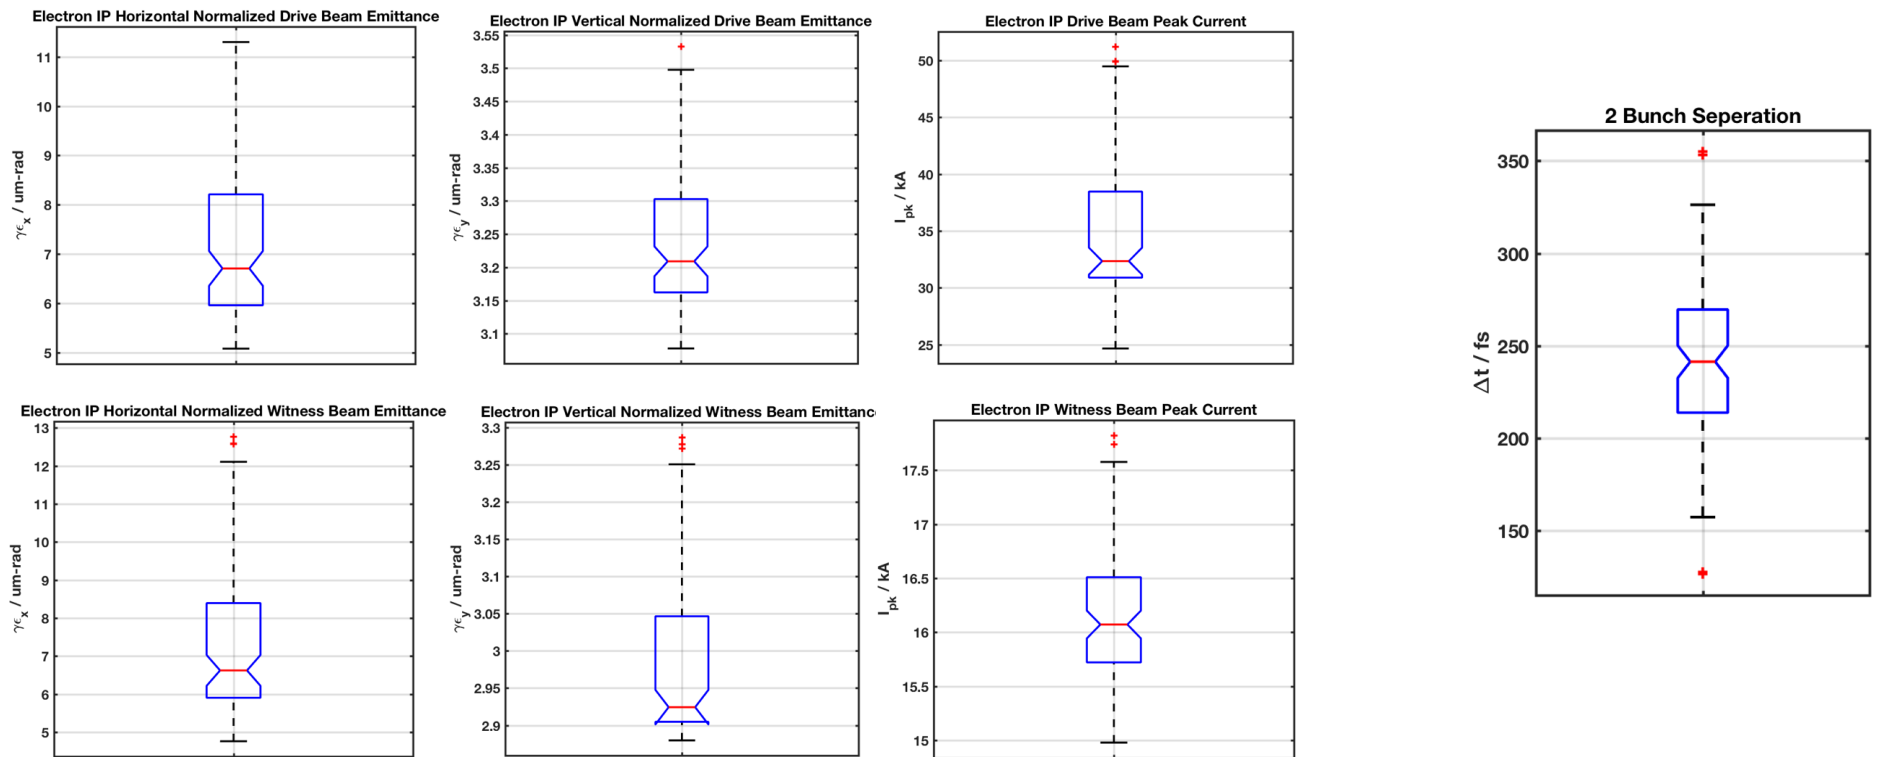

Dynamic Errors (100 Monte Carlo Seeds)

| Property | Value |
|--------------------------------------|-------------------------|
| <i>Source Charge Fluctuation</i> | 1% (e-) 2% (e+) |
| <i>Source Position Fluctuation</i> | 0.05 $\sigma_{x/y}$ |
| <i>Initial Electron Laser Timing</i> | 200 fs |
| <i>L1X Phase Jitter</i> | 0.25 degX |
| <i>L1S Phase Jitter</i> | 0.1 degS |
| <i>L2 Phase Jitter</i> | 0.25 degS |
| <i>L3 Phase Jitter</i> | 0.25 degS |
| <i>L0P Phase Jitter</i> | 0.1 degS |
| <i>L1X Amplitude Jitter</i> | 0.25 % |
| <i>L1S Amplitude Jitter</i> | 0.1 % |
| <i>L2, L3, L0P Amplitude Jitter</i> | 0.25 % |
| <i>BC0 Magnet Strength Jitter</i> | 1e-5 dB/B |
| <i>BC1 Magnet Strength Jitter</i> | 1e-5 dB/B |
| <i>BC2 Magnet Strength Jitter</i> | 1e-4 dB/B |
| <i>BC3 Magnet Strength Jitter</i> | 1e-4 dB/B |
| <i>Magnet Vibration (x/y)</i> | 1.5 / 0.5 μm |
| <i>Magnet Vib. (PEC) (x/y)</i> | 0.4 / 0.2 μm |

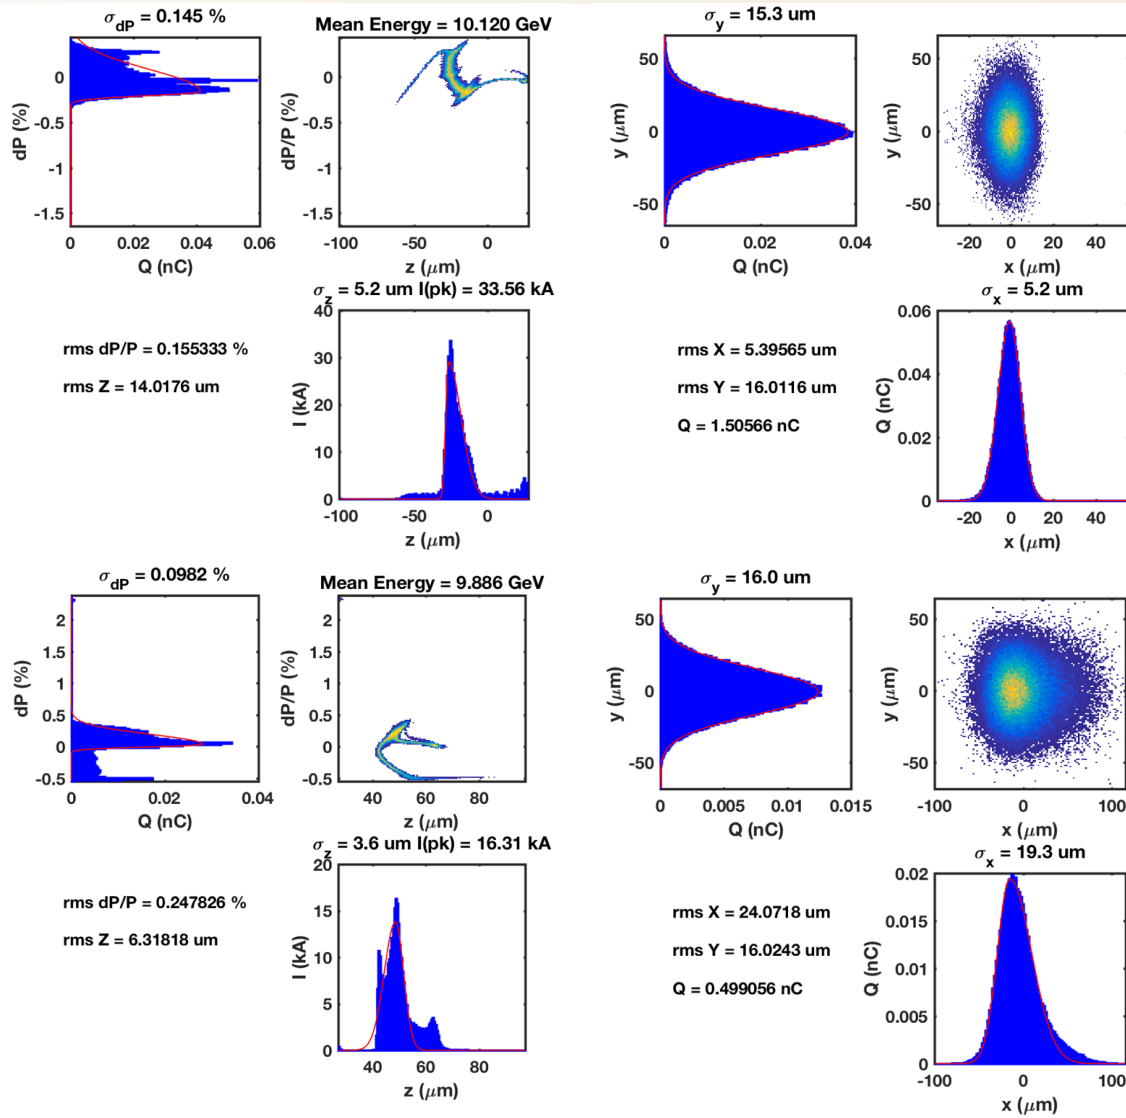

No Collimation

| Parameter @ IP | Drive Bunch | Witness Bunch |
|--|--------------|---------------|
| ϵ_x ($\mu\text{m-rad}$) (90%) | 7.2 +/- 1.6 | 7.4 +/- 2.0 |
| ϵ_y ($\mu\text{m-rad}$) (90%) | 3.2 +/- 0.1 | 3.0 +/- 0.1 |
| Δt (fs) | 243 +/- 45 | |
| I_{pk} (kA) | 35.5 +/- 6.6 | 16.1 +/- 0.6 |

Dynamic Errors (100 Monte Carlo Seeds)

Tracked Particles @ S20 IP with Collimation

Drive Beam

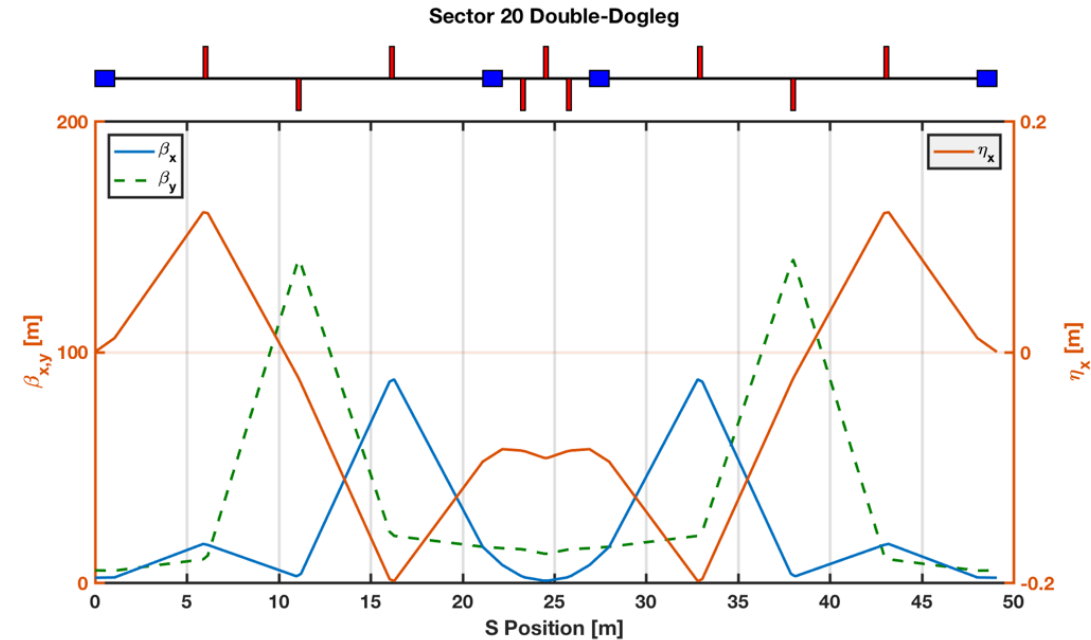

Witness Beam

This is Great! But wait, THERE IS MORE...

Current S20 BC20E (W) Chicane @ r56=+5mm

New BC20E Layout Option

CSR emittance growth properties should be better, fewer magnets, simpler lattice, lower beta functions

$R_{56} = +4.15$ mm (adjustable)

$\Delta S = 49.088$ m ; $\Delta z = 49.0773$ m ($\Delta z ==$ Current S20 W-chicane) ($\Delta s = +4.3$ mm)

- NOT compatible with current e+ sailboat (need 5.24cm path length difference BC20E-BC20P)

9 Quadrupoles & 4 bends

Possibility to reduce Δz enough to move XTCAV to common line after BC1-R?

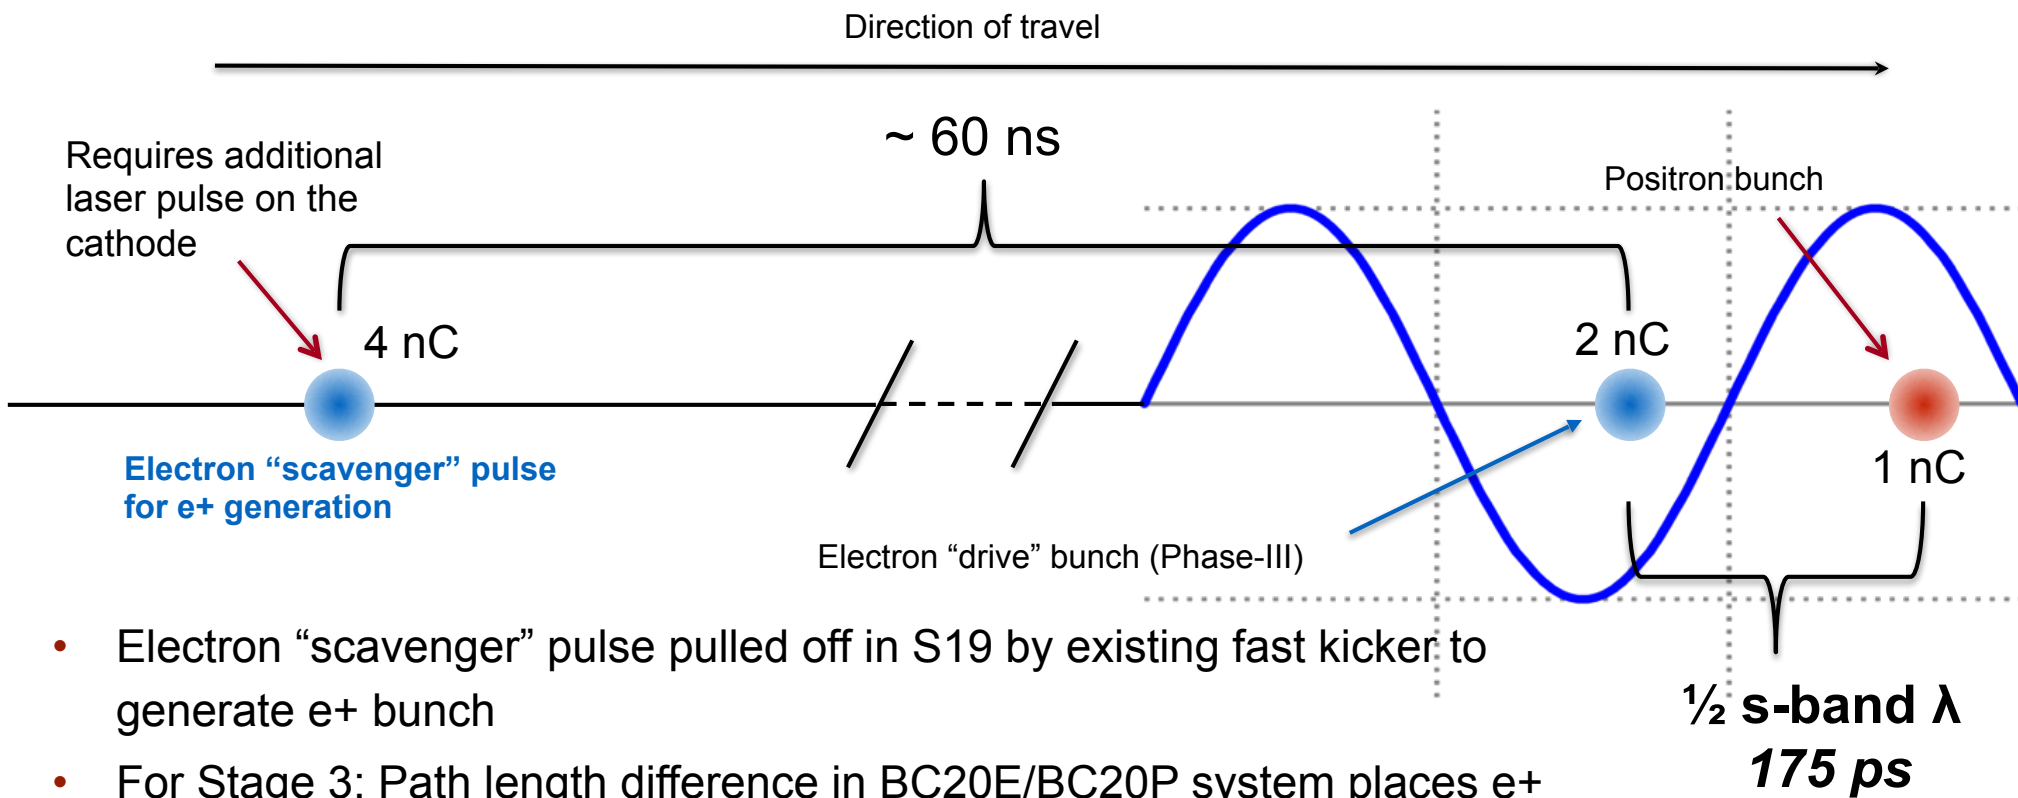

FACET-II Pulse Structure (Stage-II)

- Electron "scavenger" pulse pulled off in S19 by existing fast kicker to generate e+ bunch

Two bunches per pulse shared in L2 and L3 for Stage 2 operations

FACET-II Pulse Structure (Stage III)

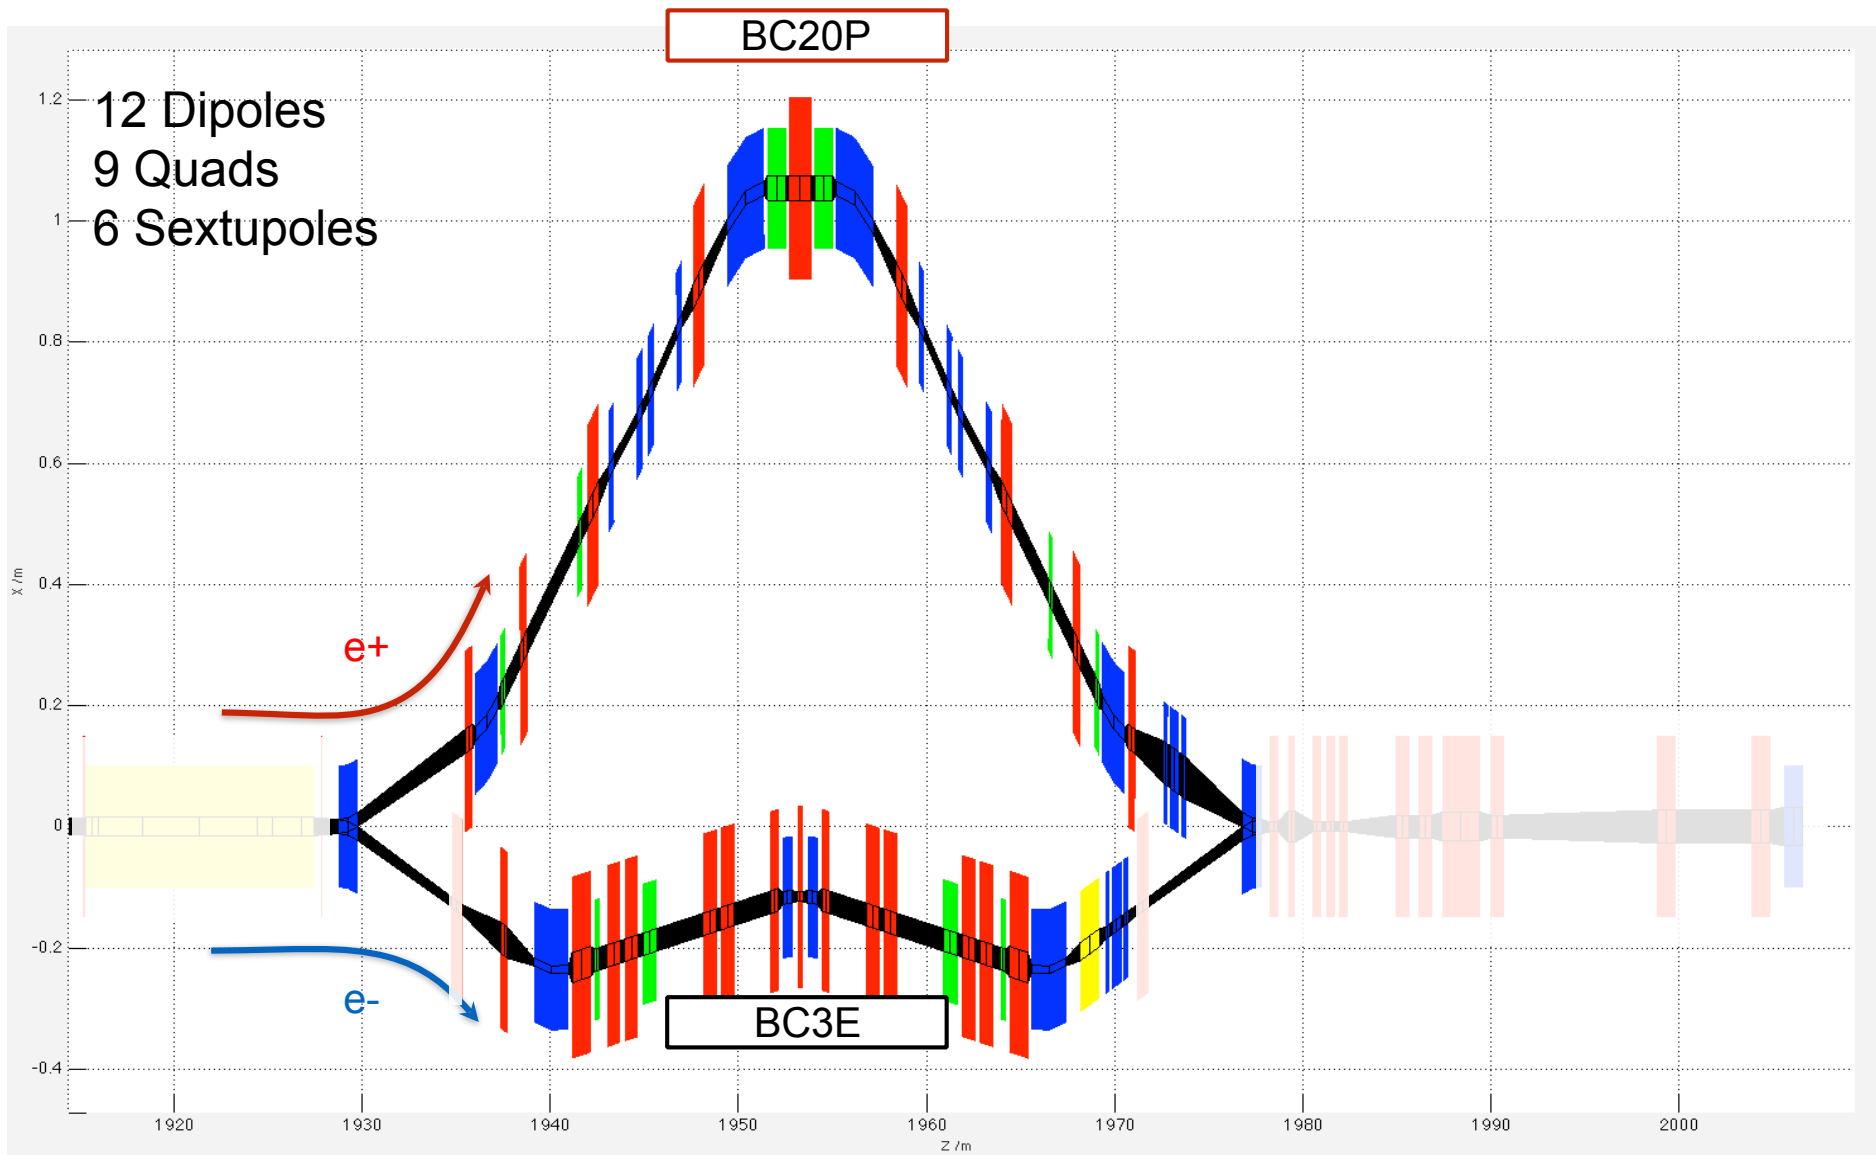

- Electron "scavenger" pulse pulled off in S19 by existing fast kicker to generate e+ bunch
- For Stage 3: Path length difference in BC20E/BC20P system places e+ witness bunch $\sim 200 \mu\text{m}$ behind e- drive bunch

Sailboat chicane design goals:

- 5.27 cm (175 ps) path length difference
- Simultaneous focusing solutions for e- and e+

Three bunches per pulse shared in L2 and L3 for Phase-III operations

Sector 20 Sailboat Chicane Overview

BC20P “Flying Saucer” Chicane
